

Elektor airsystems now in Denmark

Ostfildern (Germany), 22.05.2017

The German manufacturer for industrial fans and blowers opens official subsidiary in Hillerød, Denmark.

In Denmark Elektor is already well-known as a producer for high quality fans with a large product portfolio. Now the German engineering company opens an own subsidiary on the Danish market.

According to the company's strategy 'think global, act local' the Elektor airsystems ApS will start on 1st of July 2017. There services like direct consulting, air technical calculation at the customer's place and measurements will be offered.

Especially in the sectors wind energy, ship building, food and beverages as well as packaging industry, Elektor provides decade-long experiences in air technology and accompanies well-known customers from the idea to the solution. With an in-house department particular for fluid simulations experts solve demanding applications.

Elektor uses various materials like cast aluminum, steel and stainless steel for fans and blowers. This is why Elektor supplies many industries with pressures up to 50.000 Pa and air flows up to 1.000.000 m³/h. The products are compact and space-saving engineered as well as work efficient.

Last year Elektor airsystems already opened subsidiaries in France and Switzerland. Until the end of 2020 two further subsidiaries are planned.
